

List of LINXS meeting/conference equipment and possible uses for it:

- Apart from the equipment listed below, there are **several computers** that one can borrow to facilitate the running of remote meetings and meeting equipment.
- **Portable projector Infocus IN1188HD LED** – Can be used as a spare projector for presentations or to project people “talking heads” who are connected in to the meeting remotely. Portable and should be bright enough for professional use.
- **Logitech Group Conference Kamera + 2 extended microphones**. Can be used to adapt a room with no videoconferencing equipment for a remote meeting. This has been used successfully in the large seminar room with at least 30 attendees. Can also be set up to show the audience during Q&A, for instance, as the camera can be swiveled and remotely controlled to focus on different speakers.
- **Panasonic HC-VX1 4K Camcorder** – uses memory cards. Can be used to record people presenting, and or what’s going on at a live venue and events. Can be rigged to stream video via a computer and the **Elgato Cam Link 4K** as a live streaming “webcam”. **Please remember to plan ahead, charge the camera and obtain a memory card.**
- **Velbon Videomate 638** tripod for cameras and webcams.
- **Wireless speaker microphones** – Can be used by speakers/moderators to present in larger rooms or when the speakers need to be carefully recorded. Can also be carried by helpers at question time for instance.

If you need to use any of this equipment please contact the Admin Head, Anna Ntinidou, anna.ntinidou@linxs.lu.se.
